

RUNBOOK

1. We start with the terraform plan / apply to setup our infrastructure
2. Go to aws and copy the public dns of our bastion instance
3. Go to ~/.ssh and put the public dns into the config file
4. SSH into bastion
5. Sudo pip install ansible
6. Copy private ip address of both db's and put it in the hosts.ini file
7. Copy rds mariadb url and put it into the web and db yml files
8. Do a scp to copy over the ansible playbooks onto the bastion instance
9. Run db.yml ansible-playbook -I hosts.ini db.yml
Run web.yml ansible-playbook -I hosts.ini web.yml
